

ATHLO *chain SL*

Electric chain hoists

For loads from 125 kg to 2.500 kg

ATHLO *chain SL* is our new electric chain hoist with frequency inverter. It lifts loads more sensitively than pole-changing or single speed chain hoists.

We are offering this model in sizes AB and AC as a stationary model or with trolley. They can be combined with our ProfileMaster *PLUS* light crane system or with our slewing jib crane *VECTO jib*. In the future, we will also offer you ATHLO *chain SL* as part of a crane kit with a chain hoist.

ATHLO *chain SL*

Electric chain hoists

+ Safety is the key

Brake control with supervision, overspeed supervision and clutch slippage supervision, electronic overload prevention through load sensor and shock load control.

+ Exceptionally maintenance friendly

The inverter can be easily moved out of the housing via a hinge. This means that the brake and the components for maintenance and service are easily accessible.

+ Increased productivity

The Crane Intelligence functionality Extended Speed Range (ESR) allows faster lifting speed in partial load area.

+ Gentle operation

Good ergonomically handling at smooth operation of goods.
