

CHAINster

Electric chain hoists

For loads up to 10 t

Our electric chain hoists from the CHAINster series are designed for loads up to 10 t. They offer high durability and flexibility to handle various types of loads. We have designed the CHAINster series to help you ensure fast, efficient and smooth operations. In addition to the standard model, CHAINsterGT is also equipped with a cross travel frequency inverter drive, overload protection and non-contact limit switches for precise movement.

CHAINster

Electric chain hoists

+ Gentle and secure operation

Thanks to a low noise emission, an ergonomic load hook and a comfortable control system the load handling is very easy, precise and safe over a long period of time.

+ Low installation and maintenance costs

The modular design of CHAINster ensures a time-saving installation and maintenance of this robust industrial version of an electric chain hoist. The use of low wear components lengthen the operating times.

+ Frequency inverter (CHAINsterGT)

The integrated CHAINsterGT frequency inverter allows a broad speed range and therefore effective, fast yet precise load handling.
